

Specialized Detection

Specialized Detection Dogs are trained to meet the varied and specialized demands of Individuals, Corporations and Government Agencies, providing the finest animals for Personal, Commercial, Industrial, and Specialized Detection needs.

BOMB DETECTION

Explosive and bomb attacks are a real threat in today's world. They occur without warning and we are an easy target if unprepared. The explosives detection dog is a reliable detector and perhaps more important-a deterrent! In the field of modern explosives detection, California K9 Academy takes great pride in the acquisition and placement of bomb detection dogs. Developing a program suited to fit your specific needs is his forte.

The Personal Use for Bomb Dogs:

- Aircraft and Sea Vessel searches.
- Search any mode of transportation prior to your arrival.
- Hotel Rooms/Suites searches prior to arrival.
- Bomb dog teams can be used to search entry control access points and vehicles, parking lots, loading docks, buildings and warehouses.

Bombs have been constructed to look like almost anything and can be placed or delivered in any number of different ways. The probability of finding a bomb that looks like the stereotypical bomb is almost nonexistent. The only common denominator that exists among bombs is that they are designed to explode.

Most bombs are homemade and are limited in their design only by the imagination and resources available. When searching anything that looks suspect or unusual, the use of a trained explosives detection bomb dog to determine what is or is not a threat is unparalleled. Unfortunately, the ever-present growth in dangerous situations calls for vigilant planning.

With the increase of violence in our society, scheduled and emergency bomb/gun searches provide an extra measure of security and peace of mind.

Our Detection Dogs are non-threatening, passive response dogs well trained to search for explosives, guns and ammunition and can, in a few hours, scan for the odors of contraband explosives and weapons, a reliably faster, more cost effective, low tech alternative to modern machines and provides almost no disruption to the workplace.

Bomb dog teams are used in various security scenarios. Clearing areas prior to high profile events, for business and individuals under threat of explosives devices, or to meet the adverse security challenge that DUE DILIGENCE requires.

With bomb sniffing dogs and the bomb dog trainer, a 600 hour Explosive Detection Dog Handler's Course prepares the student for all scenarios in the often chaotic contemporary scene. Students are taken from breed and selection to deployment to courtroom and public relations.

Bomb detection teams are taught hand searches, protocols as well as bio and chemical concerns.

We can enter your scenario with a single team search or blanket it with as much as a Ten Team Sweep. One dog team can do the work of dozens of law enforcement and security officers.

Bomb Detection Dog Teams (One Dog, One Handler), have worked bomb dog detection in airports, ports of call, amusement parks, film studios, religious centers, concert venues, shopping malls etc..These dogs have been trained to detect the following:

- Black Powder
- Smokeless Powder
- Flash Powder
- Blasting Fuse
- Nitro Dynamite
- RDX
- C-4
- Sentex
- Water Gel
- Ammonium Nitrate
- TNT (Trinitrotoluene)
- Potassium and Sodium Chlorate
- PETN Data Sheet (Pentaerythritol Tetran Nitrate) –
PETN is also used in Detonating Cord and as a base charge for other explosives.

SEARCH AND RESCUE DOGS

The security community has long known the importance of rescue dog training and search dog training but now that significance is in everyone's awareness.

9/11 ushered a horrific new reality into everyday life. Access to trained rescue dogs and search dogs can be the difference between life and death.

Search And Rescue dog training develops canine candidates to become official SAR dogs. Search dogs and Rescue dogs are as specialized as any canine can be.
